<div align="center">Lab 02</div>

1. The errors and warnings that appear are a result of using functions from libraries that haven't been included. *-DCORRECT* defines the CORRECT macro to 1 which then runs the import statements within the *#ifdef* block.

2. The *-l* option links the name of the library appended to *l*. In this case, the *m* library or "math" library is not linked when the *-lm* option is omitted. The reference to *pow* requires this *m* library to be linked.

3. The 'a.out' shows that the linker included the function definitions from the external references.
